Chord Fingering

How the chords are played or indicated with your left hand (in the auto accompaniment section of the keyboard) is referred to as "fingering". There are 2 types of fingerings as described below.

Chord Basics

A chord, in music, is any harmonic set of three or more notes that is heard as if sounding simultaneously. The most frequently encountered chords are triads. A triad is a set of three notes that can be stacked in thirds. When stacked in thirds, the triad's members, from lowest pitched tone to highest, are called: the Root, the Third, and the Fifth.

Triad Type

There are following basic triad types:

| | |
|------------------|--|
| Major Triad | A root with a major third added above and a perfect fifth will consist as a "Major Triad". |
| Minor Triad | A root with a minor third added above and a perfect fifth will consist as a "Minor Triad". |
| Augmented Triad | A root with a major third added above and an augmented fifth will consist as an "Augmented Triad". |
| Diminished Triad | A root with a minor third added above and a diminished fifth will consist as a "Diminished Triad". |

Chord Inversion

We define this chord its root is not in the bass (i.e. the root is not the lowest note) as an inversion chord. When the root is in the bass, we call the chord: root-position chord. If we put the Third and Fifth in the root position, then it forms "Inversion", we call this chord "Inversion Chord". See the following major triad and its inverted chord.

Chord Name

The chord name contains two parts content: Chord root and Chord type.

Single Finger

Single finger type not only can detect single finger but also can detect multi finger. And the single finger makes it easily to play chords through only one, two or three keys. Including major, minor, seventh, and minor seventh chord. Refer to relevant picture on the right for details.

Diminished Triad Augmented Triad

Multi-finger allows you to play chords in normal fingering. Try playing the 32 chord types in C scale as listed on the right.

Note:

In full range mode, the entire keyboard will only recognize chords played in normal fingering.

MIDI

With the MIDI functions you can expand your musical possibilities. This section will let you know what MIDI is, and what it can do, as well as how you can use MIDI on your instrument.

What's MIDI?

1. MIDI (short for Musical Instrument Digital Interface) allows a wide variety of electronic musical instruments, computers and other related devices to connect and communicate with one another. MIDI carries event messages that specify notation, pitch and velocity, control signals for parameters such as volume, vibrato, audio panning, and program change information to change the voice selections.
2. The instrument can output the real-time playback information via MIDI messages and control external MIDI devices. The instrument can also accept incoming MIDI messages and generate sound accordingly.

Note:

This instrument has a USB (DEVICE) terminal, which can be connected to a PC as an MIDI input or MIDI output. This can not be connected with another instrument, unless the instrument has a USB host terminal.

The main application of MIDI

1. Used as a tone generator
This instrument can receive MIDI data from computer, and execute MIDI controls to change channels, change voices, add effect and make sound and so on. Refer to MIDI Implementation Chart for more MIDI controls.
2. Used as a MIDI Keyboard
When you play the keyboard, change the voices or turn the DSP on/off, the instrument will send MIDI data to the computer, which will be saved as records. (It only records your keyboard performance when playing along with accompaniment.) You can edit the records on the computer, such as changing the channels or voices, adding DSP effects. Then play back the records with the instrument or other sound source (such as a sound card). You can play the keyboard along with the playback. Refer to MIDI Implementation Chart for more MIDI controls.
3. Select a MIDI Device
To use the USB port of the instrument, you need to set the software on your computer. For example, set the Cakewalk Pro Audio MIDI software under WINDOWS XP operating system. Open the Cakewalk Pro Audio MIDI software.

Set the USB AUDIO DEVICE either as the MIDI Input port on the left of the pop-up window, or as the MIDI Output port on the right, then press "OK".

Alternatively, you can select the MIDI device on the TOOLS MIDI DEVICES menu of Cakewalk. Make the same settings when using other similar MIDI software.

Troubleshooting

| Problem | Possible Cause and Solution |
|---|---|
| The speakers produce a pop sound whenever the power is turned ON or OFF. | This is normal and is no cause for alarm. |
| No sound when the keyboard is played. | Make sure the master volume is set to an appropriate level. Check if headphones are plugged into the PHONES/OUTPUT jack. The R1/R2/L voice volume (Mixer) settings could be set too low. Make sure the voice volumes are set at appropriate levels. |
| When using a mobile phone, noise is produced. | Using a mobile phone in close proximity to the instrument may produce interference. To prevent this, turn off the mobile phone or use it further away from the instrument. |
| The auto accompaniment does not play back even Sync is in standby condition and a key is pressed. | You may be trying to start accompaniment by playing a key in the righthand range of the keyboard. To start the accompaniment with Sync Start, make sure to play a key in the left-hand range of the keyboard. |
| Certain notes sound at wrong pitch. | Make sure that the tuning value is set to 0. Press and hold the [+ / YES] and [- / NO] buttons at the same time, then turning the power on will set INSTRUMENT to default. |
| The Harmony function does not operate. | Please make sure the Harmony function is on. And Harmony cannot be turned on when a drum kit is selected for the voice R1. |

Notice:

If you notice any abnormality that cannot be handled, please connect the provider or specified repair agent, and have the instrument inspected by qualified service personnel.
